

How do I manage my domain?

Permission Support - 2025-04-26 - Web3 domain name

If you used your Permission wallet:

Your domain is fully owned by your Permission profile wallet.

To manage it on unstoppabledomains.com, you'll need to:

- Export your Permission wallet (e.g., to MetaMask).
- Import it into a Web3 wallet like MetaMask or Coinbase Wallet.
- Connect that wallet to Unstoppable Domains to view/manage your domain.

If you used an external wallet (MetaMask, Coinbase, etc.):

You can simply go to unstoppabledomains.com and log in with that same wallet to manage your domain.

From there, you can:

- Add crypto wallet addresses for receiving payments
- Set up decentralized websitesUpdate profile info (like social handles, email, etc.)
- Transfer the domain to another wallet

Make sure your wallet (like MetaMask or Coinbase Wallet) is connected if the domain is already minted to the blockchain, as you'll need it to confirm changes.
